

Product Highlights

- Excellent herbicide activator
- Superior penetration of plant tissue
- Excellent Canopy Deposition
- Excellent translocation within plant
- Effective wetter/spreader
- Buffers & reduces pH
- Derived from soybean oil
- Sequesters hard water cations
(Ca, Mg, Al, Fe)

Adding **Accredit™** to your tank mix delivers multiple benefits from just one adjuvant. **Accredit™** utilizes patented technology that results in excellent translocation of active ingredients into weeds.

Present 100% active blend of methylated seed oil, herbicide activators, and water conditioners to give your herbicide application extra weed-killing capabilities. It also produces mini emulsions that provide good spray mix compatibility and easier equipment clean-out.

Get your Superior and Effective control on weeds today.

Contact your AgState Agronomist or InSiteCDM Account Manager for more information.

Product Highlights

- Improves herbicide activity
- Corrects hard water antagonism
- Improves spray deposition
- Provides good wetting properties
- Improves rainfastness
- Works well in weather extremes
- Oil-Free formula mixes easily in water
- Excellent Crop safety record

Qualify™ is a combination of deposition agents, activators and water conditioners designed to enhance the degree and speed of herbicide performance. In a tank mix with herbicides, **Qualify™** improves spray deposition and uptake, while preventing antagonisms caused by poor water quality, giving you an edge with hard-to-control weeds.

To enhance your herbicide performance, contact your local AgState Agronomist or InSiteCDM Account Manager for more information.

FIERA™
AN AGSTATE PRODUCT

Untreated

Treated

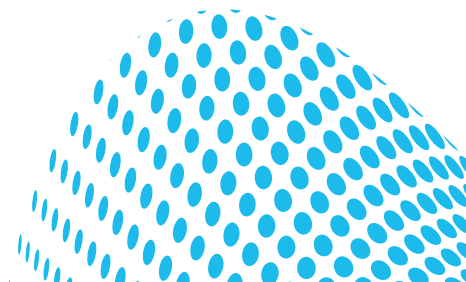

When tough, resistant weeds fight back, **Fiera™** keeps herbicides on target. **Fiera™** is a soil and spray deposition agent that improves the efficacy and absorption of soil-applied herbicides, keeping pre-emergent herbicides in the weed germination zone longer. It reduces drift and enhances application efficiency to provide quality performance that can improve results from your herbicide inputs.

Product Highlights

- Can improve pre-emergent weed control
- Improves adsorption in the soil
- Keeps ai in the weed kill-zone longer
- Enhances application efficiency
- Improves droplet size uniformity
- Reduces evaporation & drift

To add Fiera to your herbicide program, Contact your AgState Agronomist or InSiteCDM Account Manager.

Fiera is a trademark of Helena Holding Company. HPG0320
Important: Always read and follow label directions. Some products may not be registered for sale or use in all states and counties. Please check with your AgState Agronomist to ensure registration status.

FACILITATE™

AN AGSTATE PRODUCT

Product Highlights

- Improves herbicide uptake
- Enhances spreading and wetting
- Buffers spray solution pH
- Sequesters hard water ions

Facilitate™ is a specialized formulation of surfactants and buffering agents, which improves application coverage while buffering the spray mix pH. **Facilitate™** also contains adjuvant ingredients known to improve the absorption of certain herbicides, which can improve weed and grass control.

Complete your herbicide program with Facilitate!

Contacting your AgState Agronomist or InSiteCDM Account Manager for more information.

IMPLEMENT™

AN AGSTATE PRODUCT

Product Highlights

- Excellent cuticle penetration
- Improves coverage & canopy deposition
- Reduces evaporation & volatilization
- Helps tank mix compatibility

When your application requires a crop oil concentrate, **Implement™** is the industry standard of comparison. **Implement™** is a blend of heavy range, paraffin-based petroleum oil and nonionic emulsifiers designed for effective herbicide applications in tough, adverse conditions.

The penetration of waxy cuticles is to provide superior weed control. It improves coverage and canopy deposition for a high level of uniformity and consistency.

The oil component in **Implement™** reduces

evaporation while its penetrating qualities move the herbicide into plant tissue. It is easier on your crops, delivering a high margin of crop safety. It also helps improve tank mix compatibility, helping achieve a uniform tank mix.

Improve your herbicide application performance with the industry standard crop oil concentrate!
Contacting your AgState Agronomist or InSiteCDM Account Manager for more information.

Important: Always read and follow label directions. Some products may not be registered for sale or use in all states and counties. Please check with your AgState Agronomist to ensure registration status.

Product Highlights

- **Enhances herbicide efficacy**
- **Improved performance under adverse conditions**
- **Versatile use across various crops and conditions**

PowerShock™ methylated spray oil is a multifunctional spray adjuvant developed as a penetrating surfactant concentrate with superior wetting and penetrating characteristics. PowerShock™ is designed as a replacement for non-ionic surfactants and crop oil concentrates in liquid spray mixtures. When used as directed, PowerShock™ maximizes the activity and effectiveness of certain herbicides in post emergence applications.

INSULATOR™

AN AGSTATE PRODUCT

Product Highlights

Insulator™ is a special blend of nonionic, low-foam components. It is designed to quickly wet and spread a more uniform spray deposit over plant leaf and stem surfaces. With a high level of free fatty acids, **Insulator™** resists wash-off.

- **Excellent spreading qualities**
- **Maintains spray deposit moisture**
- **Reduces wash-off**
- **Enhances spray deposition**
- **Low foaming properties**

Insulator™ can positively affect pesticide spray applications and pesticide efficacy.

Implement is a trademark of Helena Holding Company. HPG0320

AgState

Adjuvants

Quick Reference Guide

ACCREDIT™
AN AGSTATE PRODUCT

Features & Benefits: MSO, Surfactant, Wetting Agent, Penetrant
Rate: 12-16oz/acre or 1%V/V

FACILITATE™
AN AGSTATE PRODUCT

Features & Benefits: Ultra High load COC
Rate: 1 pint/acre or 1-4 pint/acre

FIERA™
AN AGSTATE PRODUCT

Features & Benefits: Drift reduction with spray deposition
Rate: 4oz/acre for drift control

IMPLEMENT™
AN AGSTATE PRODUCT

Features & Benefits: Herbicide Activator, Water Conditioning, Buffering
Rate: 9.6oz/acre or 2-8 pint/100

QUALIFY™
AN AGSTATE PRODUCT

Features & Benefits: Translocating Surfactant, Water Conditioning
Rate: 6oz/acre or 2-8 pint/100

POWERSHOCK™
AN AGSTATE PRODUCT

Features & Benefits: Methylated seed oil for penetration into leaf
Rate: 1 pt/acre

INSULATOR™
AN AGSTATE PRODUCT

Features & Benefits: Wetting & spreading adjuvant
Rate: 1-2qt/100 gal
