

TAKE BACK CONTROL

The majority of grain is marketed at the bottom third of the market. AgState’s Seasonal Averaging Contract is a risk management tool that averages sales during traditional seasonal highs of the marketing year. Establish basis for delivery month, set futures at a later date.

WHEN TO UTILIZE:

The first consideration when marketing grain should be what market average you would like to achieve. The Seasonal Averaging Contract allows you to sell equal amount of bushels every day, at the close of market, during a specific time frame.

WHAT ARE THE ADVANTAGES:

- + Prices during a timeframe that is traditionally in the top 1/3 of prices
- + Minimal investment
- + Guarantees the average futures price
- + Creates a plan that removes stress and risk

ADDITIONAL FEATURES:

- Flexibility to establish your basis prior to delivery
- Detailed averaging reports available

Establishing a diversified marketing plan, that includes Seasonal Averaging Contracts, helps to take the worry and risk out of unknown markets while providing a stable ROI.

SEASONAL AVERAGING CONTRACT

THE FORMULA

December corn futures is trading at \$4.47 on April 1, you enter into a Seasonal Averaging Contract to sell 10,000 bushels of corn. The start date is April 1st to June 15th for the averaging period with an investment of 5 cents. The Seasonal Averaging Contract guarantees that your futures level for the contracted bushels will be the average of the daily close of Decembers futures during the averaging period. You can set the basis level at anytime prior to September 30th.

See below examples on how this would have worked last year vs. selling in the fall.

SEASONAL AVERAGING CONTRACT

The average futures level for April 1st, 2025 to June 15 2025 was \$4.47 CZ25

\$4.47 Futures Seasonal Average Contract
